

Smoking Poly Windows Installation

Version 0.2.0 quick-start guide for the packaged Windows release.

Before You Start

- Use Windows 10 or Windows 11.
- Keep the bot in its own extracted folder.
- Make sure you have an internet connection for Polymarket, licensing, and optional OpenRouter access.

Install and Launch

1. Download the latest Windows zip release.
2. Extract the zip to a normal folder such as Desktop or Documents. Do not run it from inside the zip.
3. Double-click SmokingPoly.exe.
4. A terminal window stays open while the bot is running. This is normal and is also how you stop the app safely.
5. Open your browser at <http://127.0.0.1:5000/dashboard>.

First Run Setup

The app creates a local data folder next to the executable and keeps the .env file in the executable folder root.

Start in Paper Trading mode first. Save your wallet only after the dashboard loads correctly.

If port 5000 is already in use, edit .env, change PORT, restart the app, and open the new dashboard URL.

Live Trading Activation

1. Buy the live license in Whop using the wallet funder address you want to trade with.
2. In Settings, save the matching Polymarket wallet private key and POLY_FUNDER.
3. Wait for the background activation check, or press Check Activation if needed.
4. Only turn off Paper Trading once the license shows Active.

Safe Shutdown

- Press Ctrl+C inside the terminal, or close the terminal window.
- Do not kill the process from Task Manager unless the app is completely stuck.
